

Programming for non programmers

Overview

There's no doubt that in today's world everyone needs to learn how to code, or at least understand the basics of the world of coding, and what it is that these programmers do all day.

This part time evening course will provide you with the basics of programming so you can build a basic portfolio website using html/css and JavaScript. In this focused course you will learn all the key terms of programming, learn how to understand and work with programmers, and get a taste of what it would mean to develop your career as a programmer.

Who Should Join?

If you are interested in programming, always wanted to understand what programmers do, want to develop your understanding and experience in coding, this is the course for you. Short, focused, and to the point you will get the basic skills you need to push your personal and professional development.
